                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABLA8959 to ABLA9300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gegectecteraagecagegretecaggareceratecaageagaaceargretee

                                                                                                                                                                                                            The present invention describes human lung turmour proteins. Human lung turmour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung turmour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung turmour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABR74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GGGTTAGGAGCCGGAAAATTCAAATCCGAAATATTCCACCCCAGCTCCGATGGGAAGTAC

                predetermined cut-off value, and determining the presence of a cancer in the patient. (1) and (11) are useful in pharmaceutical compositions, e.g. vaccines. (1) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ92145 to ABQ92486 and ABP61866 to ABP61992 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human lung tumour proteins. Human lung activaties and polynucleotides have extostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL493300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  describes human lung tumour proteins. This invention describes a novel isolated polypeptide (I) which which which have cytostatic activity. The polypeptides and polynuclectides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention detection at subsequent time points and comparing the results from the different time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                    Isolated polypeptide comprising an immunogenic portion of a lung protein is used for detecting and monitoring progression of lung in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                Claim 1a; Page 258-259; 261pp; English.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    836
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GTAGAGCAAGATACCGAGACAAAAATCACCATCTCCTCGTTGCAAGACCTTACCCTTTAC 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   896

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEX B X B X B X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemmic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, bulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end stage renal disease), hypoproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, burstiss and appendicitis), allergic reactions and conditions (e.g. asthma), blood infarction) and cancerous diseases. New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.

Claim 1; SEQ ID NO 745; 980pp; English.

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic confined symptoms associated with the disorders and in diagnostic confined in alleviating symptoms associated with the disorders and in diagnostic confined in a line of the protein confined in the disorders and in diagnostic constant in the sease e.g. rheumatoid arthritis, hyperproliferative disorders e.g. corplasms of the breast or liver, cardiovascular disorders e.g. cardior concepts of the confined confi

                                                                                                                                                                                                                                                                                                                                                                                                                                                      197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     317
                 polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conformation and cancertous diseases. Sequences ABX71173-ABX74167 represent human novel polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                         77
             The polypeptides and polynucleotides are useful in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AGTACCAAGAGACCAGACCCCTGATGAGAACGACCAGGTCATCGTGAAAATCATCGGACA

```
The invention relates to isolated nucleic acid molecules and their cencoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, crabbits goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a completion. Antibodies to the proteins can also be used in pathological condition. Antibodies to the proteins can also be used in assays immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays immunoassays e.g. redioimmunoassays or enzyme linked immunosorbant assays (BLISA). Disorders which are diagnosed or treated include autoimmune (Grasases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. arrest, cerebrovascular disorders e.g. cerebral ischaemis, angiogenesis, arrest, cerebrovascular disorders e.g. cerebral ischaemis, angiogenesis, carest, orenebral dungi and ocular disorders e.g. corneal infection, and many other disorders e.g. Alzheimer's disorders e.g. corneal infection, and many other disorders e.g. Alzheimer's disorders e.g. corneal infection, corner also be used to aid wound healing and epithelial cell proliferation, corpresent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutrititional components. The present sequence encodes a novel secreted protein of the present ceregement of the printed for sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                       New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 1085.4; DB 4; Length 1182;

```

The present sequence encodes a murine c-myc coding region determinant binding protein (CRD-BP). The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth

) Primers useful for synthesizing full length cDNA clones and their use genetic manipulation. 830 Primers useful

Claim 8; SEQ ID NO 3886; 1380pp + Sequence Listing; English.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers mable the production of the full length cDNA assily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

```
The present sequence represents a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 polynucleotide was isolated from SK-MEI-CC antigen designated CT7. The polypeptide has some homology with MAGE-10, implied to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptides which provoke lysis by cytolytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and antigens can be used as an immunogenic or vaccine composition with an antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony contains the cancer (GM-CSF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             327

An alternative form of DNA encoding cancer associated antigen KOC-2. Cancer associated antigen; KOC-2; cancer; vaccine; CT7; ss. AAZ36153 standard; DNA; 1946 BP. (LUDW-) LUDWIG INST CANCER RES. 98US-00061709. 99WO-US005766. (first entry) Homo sapiens. WO9954738-Al 16-MAR-1999; 11-FEB-2000 17-APR-1998; 28-OCT-1999. AAZ36153; AAZ36153

Knuth A, Stockert E, Jager E, ທ່ Tsang WPI; 2000-013284/01. Gure A, Chen Y,

old LJ;

Nucleotides representing cancer-associated genes, used to develop products for the diagnosis, monitoring and treatment of cancers.

Claim 55; Page 42; 44pp; English.

The present sequence represents an alternative form of a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 polypucleotide was isolated from SK-MEL-37 melanoma cells. The polypeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV43877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polymucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
